Recommended Vaccination Schedule

Vaccine Age	BCG	Combination DTap, Hib, IPV	OPV	Hep-B	HIB disease	Rotavirus	Pneumococcal	Measles	MMR	Hep A	Influenza	Chicken Pox	Typhoid
At Birth	Dose	Dose 1	Dose 1										
1.5-2 Months		Dose 1	Dose 2	Dose 1	Dose 1	Dose 1							
2.5-3 Months		Dose 2	Dose 3		Dose 2	Dose 2							
3.5-4 Months			Dose 3	Dose 4	Dose 3								
6 Months				Dose 3		Dose 3							
9 Months								Dose 1					
13 Months									Dose 1	Dose 1		Dose	
15-18 Months		DTP/DTaP Booster	Booster 1		Booster								
18-24 Months									Dose 2				One dose every 3 years
5 Years		DTP/DTaP Booster	Booster 2						Dose 2				

In case of high risk, vaccine is recommended at birth with 2 subsequent doses at monthly intervals.
Four doses of vaccine may be administered when a birth dose is given.

Infants between 6-12 months should get 2 of Hib vaccine at one month's interval. To ensure long term protection a booster dose is recommended in the second year. Children between age 1-5 years, require one dose only.

Children 6 months-3 years of age receiving vaccine for the first time, will require a second dose of 0.25ml after an interval of at least 4 weeks.

Typhoid Fever One shot every 3 years for children over 2 years of age.

Chicken Pox One year and above single shot. Subject, 13 years and above will require 2 doses.

Rotavirus Two dose 1 month apart between 6 weeks to 6 months.
