

*RAJH* : 1924 8641

The Rajagiri Hospital is an ambitious initiative from the renowned Rajagiri (CMI) group of institutions based in the pristine State of Kerala (India) to provide state-of-the-art healthcare services located in Cochin. The 550 bedded multi-specialty tertiary care hospital with all modern medical services including diagnostic, therapeutic, curative, rehabilitative and preventive care under a single roof. When completed the hospital will consist of a 1200 bedded healthcare facility to be followed by Medical College, College of Nursing, Institute of Paramedical Sciences, Rehabilitation center and Senior Citizens' Village.

Name : Baby of Minu Mary Thomas  
 Address : Kattalamattathal CAD, Puthumanoo, Puthencherry.  
 Date of Birth : 04-04-19  
 Time of Birth : 18:45hrs.  
 Sex : Male / Female  
 Delivery : Normal / Vacuum / Forceps / Caesarean  
 Birth Weight : 3.935kg  
 Length : 51cm  
 Head Circumference : 35cm  
 Blood Group :  
 Name of Mother : Minu Mary Thomas  
 Mother's Blood Group :  
 Name of Father : Liju K I  
 Father's Blood Group :  
 Remarks :

Name of Doctor : Dr. Madhu George.  
 Vaccination days : All vaccines except BCG will be given during routine hours (9.00 am - 4.30 pm) on all-working days. BCG will be given on all Tuesdays (9.00 am - 4.00 pm).

Attend pediatric OPD for immunization

### PARENTS TO NOTE

Immunization can be given in the presence of minor illness. Prior to immunization, inform your doctor if the child has had any significant reactions to the last dose.

**BCG**  
 A nodule appears 3-4 weeks after BCG Vaccination. It may soften or ulcerate in 2-4 weeks. No application or fomentation is necessary. It heals, leaving a scar, indicating effective vaccination.

**DPT**  
 There may be mild fever and pain, redness and swelling at the site of injection. A small painless lump may remain for a few weeks. For fever and pain, Paracetamol syrup / tablet may be given. The dose can be repeated for every 4-6 hours if required. Please consult your doctor for any other reactions.

**Measles / MMR**  
 A few children get fever 4-10 days after the vaccination. Paracetamol syrup / tablet may be given if required.

**Optional Vaccination**  
 Please read your card to know the appropriate age for optional vaccines.

**Feeding**  
 Breast milk is the best for your baby. Give it exclusively for the first 6 months. It gives full nutritional requirements for physical and brain growth. It provides emotional gratification needed for the baby. Infections are less in a breast fed baby.

Start semisolids (Rice, Dhal, Mashed vegetables) from the 6<sup>th</sup> month onwards. Slowly change to solids from the family menu by one year.

Consult your pediatrician, when in doubt.

- Vaccines for High risk Children\***
- Influenza
  - Meningococcal Vaccine
  - Japanese Encephalitis
  - Cholera Vaccine
  - Rabies Vaccine
  - Yellow Fever Vaccine
  - Pneumococcal Polysaccharide Vaccine (PPSV 23)
